

## ME MYSELF & I SCANS PRESENTS: HALCYON VOLUME I, CHAPTER 2

MMI-SCANS.TUMBLR.COM

## PAGE 6 NOTES:

Genetic carriers actually carry one inactive allele of an recessive genetic trait. They're able to pass this allele onto any offspring they may have, but they won't display any trait themselves.

ince there's a high correlation between Kuga genes and displayed criminal behaviour, anyone with Kuga genes technically isn't a carrier. Unfortunately, I ran out of space on the page for a more accurate description.

am truly sorry for this inaccuracy.
